

# High-quality clean, lower cost

Receive up to

**\$15,000\***

per ozone system

Adding ozone technology to new or existing commercial washing machines can dramatically reduce operating costs. Ozone cleans and disinfects, without hot water. The technology is ideal for long-term care homes, hotels and motels. We can help you upgrade to an ozone system with incentives that cover up to 50 percent of project costs.

## How the technology works:

- The system releases ozone particles into the water, where it dissolves at cold to ambient temperatures.
- The ozone activates the detergents, improving their cleaning capability.
- This results in cleaner laundry, without the energy use or costs of hot water.

## Key benefits:

Reduces energy use by shortening wash cycles and drying times.

Extends fabric life and disinfects by chemically reacting with soils.

Allows for large volumes of laundry to be washed faster and more efficiently.

Improves staff productivity and working environment.

Freshen up and save

**\$0.04/lb**

Incentives based on the weight of laundry processed annually, up to a maximum of \$15,000 per ozone system installed.
